Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Maron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila NA provided by the BDGP from the isogenic strain y2; cn bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     551
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    431 GTATAAAGTTAGAAATTTTTATAATTTTCAGCTTTTGTAAAATTATTTGTATTTTTAAAA 490

WashIngton University School of Medicine
1st strand of cDNA was synthesized with reverse transcriptase and
1st strand of cDNA was synthesized with reverse transcriptase and
1st color of cDNA was amplified by PCR using modified
2st color primers. The final cDNA was cloned in pAMP1 vector in
2st annealing reaction with Uracil DNA Glycosylase (UDG). Library
2st constructed by Y.Korshunova and M. Lovett. Library materials
2st provided by Mills JC & Gordon JI.

/note="Vector: pAMP1; This library was created from laser-captured isthmal cells from tox176 transgenic mice. Ist strand of cDNA was synthesized with reverse transcriptase and oligo(dT) beads, then cDNA was amplified by PCR using modified SMART primers. The final cDNA was cloned in pAMP1 vector in annealing reaction with Uracil DNA Glycosylase (UDG). Library constructed by Y.Korshunova and M. Lovett. Library materials provided by Mills JC &
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /tissue_type="Gastric Epithelial Progenitor"

/clone libs"Plasmodium falciparum 3D7 asexual CDNA"
/note="Wector: pBluescript SK plus; Site_1: EcoR1; Site_2:
XhoI; Library was constructed by Debopam Chakrabarti.
Total RNA samples were isolated from mixed stage
saponin(0.1%)-lyeed P. falciparum 3D7 infected
erythrocytes by the acidic guanidinium-phenol chloroform
method. The poly A+ RNA was isolated by the polyAT-Tract
mRNA isolation system (Promega, WI) using streptavidin
Magnesphere particles. Directional cDNA libraries were
constructed by oligo d(T) priming of poly(A)+ RNA (5mg)
into EcoR1 and XhoI sites of 1 ZapII vector using the Zap
cDNA inserts in the library was between 1.0 and 1.5kb.
Clones were mass excised using the ExAssist helper phage
(Stratagene), the phagemids were precitptated with PEG
8000 and extracted with phenol/chloroform. Phagemid DNA
was electroporated into DH10B cells."

/note="Vector: pBluescript SK plus; Site_1: EcoRI; Site_2:
XhoI; Library was constructed by Debopam Chakrabarti.
XhoI; Library was constructed by Debopam Chakrabarti.
Total RNA samples were isolated from mixed stage
saponin(0.1%)-lysed P. falciparum 3D7 infected
erythrocytes by the acidic guanidinium-phenol chloroform
method. The poly A+ RNA was isolated by the polyAT-Tract
mRNA isolation system (Promega, WI) using streptavidin
Magnesphere particles. Directional cDNA libraries were
constructed by oligo d(T) priming of poly(A)+ RNA (5mg)
into EcoRI and XhoI sites of 1 ZapII vector using the Zap
cDNA synthesis kit (Stragene, CA). The average size of the
cDNA inserts in the library was between 1.0 and 1.5kb.
Clones were mass excised using the ExAssist helper phage
(Stratagene), the phagemids were preciptated with PEG
8000 and extracted with phenol/chloroform. Phagemid DNA
was electroporated into DH10B cells."

122pp; English.

Acn56103 Cotton an

The invention relates to a vector for expression of a target protein on a microbial cell surface. The vector of the invention comprises either one

New expression vector containing gene(s) that encode a poly-gamma-glutamate synthetase complex, useful for producing proteins (e.g. vaccines or enzymes) on the microbial surface of Gram-positive and/or Gram-negative bacteria.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              or more than two genes of the Bacillus subtilis poly-gamma-glutamate synthetase complex (pgsBCA) to facilitate microbial surface expression of the target protein. The pgsBCA gene complex comprises the pgsB, pgsB and pgsA genes and is normally expressed in the outer membrane of Bacillus subtilis. The vector can be transformed into either Gram-positive or Gram negative bacteria (e.g., Escherichia coli), and can be used for the surface expression of various proteins of interest such as enzymes, antigens, antibodies, attachment proteins or adsorption proteins. Proteins recombinantly produced using the vector of the invention can be used as, for example, vaccines or enzymes. The present sequence represents the Bacillus subtilis pgsBCA complex gene pgsB, which is specifically claimed for use in the vector of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1182 BP; 396 A; 237 C; 274 G; 275 T; 0 U;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Local Similarity

Disclosure; Page 60-61; 69pp; English New vector containing pgs A-C genes encoding poly-gamma-glutamate synthetase complex and an antigen protein gene of human papilloma virus, useful in preparing vaccine for treating or preventing mucosal tumor, e.g. cervical cancer.

The present invention relates to a vector for preparing a vaccine which contains one or more than two genes, i.e. pgs A-C encoding poly-X-glutamate synthetase complex and an antigen protein gene of human papilloma virus. The vector and microbes transformed with it are useful in preparing vaccines for treating or preventing mucosal tumour, e.g. cervical cancer. The present sequence is a Bacillus subtilis poly-X-glutamate synthetase complex coding sequence.

Park YG,
                                           The invention relates to a novel method for surface expression of peptides P5 and Anal3 using a poly-gamma-glutamic acid synthase (pgs)BCA gene, thereby removing a purification process of peptides P5 and Anal3, and using lactic acid bacteria for the surface expression, so that peptide antibiotics can be cheaply and stably mass-produced. An expression vector pHCEILB:pgsA-P5 comprises one or more genes encoding poly-gamma-glutamic acid synthase selected from pgsB, pgsC and pgsA, and a gene for dipolar peptide antibiotics having antimicrobial, antifungal and anticancer activities, wherein the dipolar peptide antibiotic has homology to the peptide P5 encoded by the nucleotide sequence set forth in ADV65737. The present sequence represents the B. subtilis poly-gamma-glutamic acid synthase B gene used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 B. subtilis poly-gamma-glutamic acid synthase B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-APR-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      KR2004034780-A.

                                                                                              The invention relates to a vector for expression of a target protein on a microbial cell surface. The vector of the invention comprises either one or more than two genes of the Bacillus subtilis poly-gamma-glutamate synthetase complex (pgsBCA) to facilitate microbial surface expression of the target protein. The pgsBCA gene complex comprises the pgsB, pgsB and pgsA genes and is normally expressed in the outer membrane of Bacillus subtilis. The vector can be transformed into either Gram-positive or Gram-negative bacteria (e.g., Escherichia coll), and can be used for the surface expression of various proteins of interest such as enzymes, antigens, antibodies, attachment proteins or adsorption proteins. Proteins recombinantly produced using the vector of the invention can be used as, for example, vaccines or enzymes. The present sequence represents a microbial cell surface expression vector of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cell surface; expression vector; microbial; poly-gamma-glutamate synthetase; Bacillus subtilis pgsBCA complex; surface expression; Gram-positive bacterium; Gram-negative bacterium; enzyme; antigen; antibody; attachment protein; adsorption protein; vaccine; pGNBCA; cyclic; circular; ds.
                                                                                                                                                                                                                                                                                                                                 New expression vector containing gene(s) that encode a poly-gammaglutamate synthetase complex, useful for producing proteins (e.g. vaccines or enzymes) on the microbial surface of Gram-positive and Gram-negative bacteria.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Sung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Microbial cell surface expression vector

A plasmid comprising the present sequence may be used to transform Escherichia coli. The transformants express the enzyme and PGA is produced in the culture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1;

Claim 4; SEQ ID NO 2694; 200pp; English

CC The invention describes a method of monitoring differential expression of compares in a first Bacillus cell relative to expression of the genes in cother Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus cells. The method is useful for measuring the expression of composition of the same genes in a first Bacillus cell relative to expression of the same genes in one or more second Bacillus cells. The method is useful for monitoring compositions of several genes from a Bacillus cell discovering new genes, identifying possible functions of unknown open reading frames and contitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions.

CC in which Bacillus cells adapt to changes in culture conditions. CC environmental stress or other physiological provocation. Extensive follow cup characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence information is available. This sequence represents a genomic sequence information is available. CC of the invention. Note: The sequence data for this patent did not form cc directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                  ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained apartment of the printed specification, but was obtained apartment of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         14-AUG-1997;

                                                                                                                                                                                                                                           The invention describes an isolated nucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any confidence of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as CC given in the specification. Also described are: a recombinant expression vector; a cell comprising a recombinant expression vector of (1); cc producing an S. epidermidis polypeptide; an isolated nucleic acid comprising a nucleotide sequence of at least 8 nucleotides in length; a comprising a nucleotide sequence of at least 8 nucleotides in length; a comprising a nucleotide acid cited above and a carrier; treating infection, composition for prevention or treatment of an S. epidermidis confection; a recombinant or substantially pure preparation of an S. epidermidis polypeptide or its fragment; a computer veadable medium having recorded in it the nucleotide sample; a computer readable medium having recorded in it the nucleotide sequences with SEQ ID NO: 1-3772 or its fragments; a computer based commercial importance; a computer based system for identifying fragments of the Staphylococcus genome of the Staphylococcus plasmids of commercial importance; identifying fragments of the Staphylococcus and/or plasmids acid fragments of the Staphylococcus genome of the Staphylococcus and/or plasmids acid fragments of the Staphylococcus countered acid in a computer based system for identifying fragments of the Staphylococcus and/or plasmids acid fragments of the Staphylococcus denoments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  08-NOV-1997;

                                                                         genome and/or plasmids; and identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of an Staphylococcal epidermidis bacterial infection. This sequence encodes a S. epidermis protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polypeptide and encoding nucleic acid derived from Staphylococcus epidermidis, useful for diagnosing, preventing artreating an S. epidermidis bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-NOV-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ADS01519;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADS01519 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides (II) (and/or nucleic acids) may then be activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polymucleotide sequences from the present invention. AAH55091 to AAH55098
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2001-316495/33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           09-NOV-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09-NOV-2000; 2000WO-US030782

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CThe present invention describes an isolated polynucleotide (I) of CC Alloiococcus otitidis genomic DNA, which encodes an antigenic protein. CC Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1) (2) an isolated polypeptide that is encoded by the polynucleotide (I); (2) an isolated polypeptide that is encoded by the polynucleotide (I); its CC complement, degenerate variant or fragment; (3) a genetically engineered CC complement, degenerate variant or fragment; (3) a genetically engineered CC composition comprising the polypeptide of (1); (5) an immunogenic CC composition comprising the polypeptide, its complement, biological CC composition or fragment, or the polypucleotide that is comprised in the CC expression vector; (6) a pharmaceutical composition comprising the CC expression vector; (6) a pharmaceutical composition comprising an array CC of the polypeptides of (1), their biological equivalent or fragment; (8) CC immunising against Alloiococcus otitidis by administering to a host the CC immunising against Alloiococcus otitidis by administering to a host the CC immunising against Alloiococcus otitidis by administering a container CC ortitidis in the biological sample; (10) a kit comprising a container CC ortitidis in the biological sample; (10) a kit comprising a container CC ortitidis in the culture; (1) can be used in gene therapy. The CC ortitides, polypeptides, antibodies and compositions of the present container conditions suitable to produce the polynucleotides are useful for expressing and detecting Alloiococcus ortitidis. The present area useful for expressing and detecting Alloiococcus ortitidis. The present sequence encodes an Alloiococcus otitidis antigen ortical transparent present condessant alloiococcus otitidis antigen orticals.

```
The present invention describes an isolated polynucleotide (I) of CC Allolococcus otitidis is a Gram-positive bacterium. Also described: (I) CC Allolococcus otitidis is a Gram-positive bacterium. Also described: (I) CC an isolated polypeptide that is encoded by the polynucleotide (I); (I) an expression vector comprising the novel isolated polynucleotide (I); (I) an CC complement, degenerate variant our or fragment; (3) a genetically engineered CC host cell, transfected, transformed or infected with the vector of (I); (I) an antibody specific for the polypeptide of (I); (I) an immunogenic composition comprising the polypeptide, its complement, biological equivalent or fragment, or the polypeptide that is comprised in the CC polypeptide of (I), their biological equivalent or fragment; (I) a protein chip comprising an array CC of the polypeptides of (I), their biological equivalent or fragment; (B) immunising against Allolococcus otitidis by administering to a host the CC immunising against Allolococcus otitidis by administering to a host the contitidis in the biological sample; (I) a kit comprising a container CC or the antibody of (A); and (II) producing a polypeptide by culturing the contitidis in the biological sample; (I) a kit comprising a container CC or the antibody of (A); and (II) producing a polypeptide by culturing the CC polypeptide from the culture. (I) can be used in gene therapy. The CC polypeptides, polypeptides, antibodies and compositions of the present invention can be used for treating and diagnosing diseases, drug creating antibodies are useful for expressing and detecting Allolococcus otitidis. Which is given in the exemplification of the present on the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New Alloiococcus otitidis polynucleotides and polypeptides, useful for treating and diagnosing diseases, drug screening assays and monitoring effects during drug clinical trials.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2003-505284/47.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fletcher LD,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         29-NOV-2001; 2001US-0333777P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           that specifically hybridises to a sequence contained in a Bacillus anthracis target sequence. The methods and compositions of the present invention are useful for detecting the presence of Bacillus anthracis nucleic acid in a sample, in particular for detecting cutaneous and respiratory anthrax infections. Two synthetic genetic target sequences, derived from pagA and capB gene sequences, were synthesized to provide known standards for testing oligonucleotides for detection of the genes carried by the plasmids pXO1 and pXO2, without requiring handling of virulent Bacillus anthracis. The present sequence represents a capB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bacillus anthracis;
